MAKING THE DIAGNOSIS: THE PHYSICIAN'S TASK, AND HOW YOU CAN HELP

November 6, 2015
Biotechnology Building G-01

Presenter: Frederick Barken, MD

If you're a Cornell researcher at work on a potentially commercializable medical diagnostic, this event is a must.

It provides an opportunity to discuss medical diagnostic development with one of their end-user physicians.

Come learn from a local physician who is also a volunteer mentor for Cornell's McGovern Center:

- How doctors think
- How doctors gather clinical data
- Who orders tests?
- What's a good point-of-care diagnostic test?
- Example of a wonderful screening test
- Designing the next great point-of-care test
- US Health insurance and understanding how it works
- The Affordable Care Act
- The specter of malpractice

Following Dr. Barken's talk, meet and hear from **Joel Tabb**, PhD., a scientist and entrepreneur working in the field of medical diagnostics.

Bring your questions. See you there.
